	Presentation of Visual Perception and Physical Properties of Color. On 14 January of the National Bureau of Standards discussed with RED personnel the complexities of the visual perception and physical properties of color as they might be applied to photointerpretation. Tentative arrangements have been made for a related management level demonstration to be given in the NPIC auditorium on 26 February 1970.

- has been bringing the RED contributions to the DDS&T Contract Information System up to date.
 Where 16 contracts were initially entered, 36 are now. Some of the missing contracts date to Fiscal Year 1967. Additionally a system is being designed (on paper) to eliminate the duplication between the DDS&T requirements and the Project Information Sheets set up in RED.
- 13. Standardized Naming Guide. The program to establish a standardized project naming guide is moving forward and showing some hopeful signs of progress.
- NPIC on 7 January 1970 and presented a movie, talk and demonstration on the various capabilities and uses of the DYLUX photoreproduction materials. Samples and literature were distributed. Since schedule conflicts and poor weather presented a considerable number of Center personnel from attending the presentation, another briefing is planned for the near future.
- Proposals. Proposals for an enlarger/reader/
 printer and for a modified P. I. reproducing light
 table have been received from the

Proposal for Additional Computer Storage. Messrs.

main purpose of discussing additional computer

storage requirements for the High Participation.

storage requirements for the High Precision Stereo Comparator. A proposal is expected by the first week in February. A review and recommendations will follow shortly after receiving the proposal.

- 17. Dry Silver Step-and-Repeat Printer/Reader. The dry silver step-and-repeat printer/processor is no longer required as part of the basic R&D program. This printer/processor was conceived in 1965 and was completed in 1967. Since that time, it has been used as GFE in the development of dry silver and dry diazo photoreproduction materials. However, this program has progressed to the point where this particular printer/processor can be released for use by the Center and/or the community. RED can supply particulars and support requirements for any potential users.
- 18. Mid-70's P. I. Workstation. On 8 January, Mr.

 was assigned as Coordinating Officer for the evaluation of the proposed Mid-70's P. I. Workstation.
- 19. Budget. On 16 January, managed the prepara 25X1 tion of the RED FY-70 Mid-Year Budget Review and the compilation and revision of the RED 5-Year Plan.

- B. Anticipated Items of Interest for February 1970.
 - 1. Demonstration. On 6 February, there will be a second demonstration of the Graphics

 Terminal capabilities as they might be applied to automated editing and graphics. This demonstration will be held at the National Institute of Health in Bethesda. Invitations to attend this demonstration have been submitted to the Center's Groups.
 - 2. Stereogram Printer Optical Development. This effort, under PAR 253 of the special contract with was started in July 1969 to design, fabricate, and test a breadboard printer with the optical elements necessary to compensate for distortions and print high-quality stereograms readily fusible with simple, low-cost stereoscopes. Although intended as a 12-month feasibility study, the has encountered difficulties with the optical design which will add substantially to the cost and time to complete. Consequently, they will provide by mid-February 1970 a revised statement of work for the first 12
